**LOJACK PARTNERS WITH AREA LAW ENFORCEMENT AGENCIES TO
HELP COMBAT AUTO THEFT IN THE GREATER CHARLOTTE REGION**

***LoJack Stolen Vehicle Recovery System Offers Greater Charlotte Area Residents
Powerful Vehicle Theft Protection Solution***

CHARLOTTE, NC – May 18, 2004 – The citizens of the greater Charlotte region can rest a little easier today knowing that LoJack Corporation's (LOJN: NASQ) Stolen Vehicle Recovery Systems are now available in the greater Charlotte area. With a 90 percent recovery success rate, the LoJack system is a time-tested radio frequency-based theft protection solution. It is directly integrated into area law enforcement agencies that leverage the system to track and recover LoJack-equipped vehicles if they are reported stolen.

The availability of LoJack was announced officially here today at a press conference outside the Charlotte-Mecklenburg Police Department. Ten state, regional and local law enforcement agencies participated in the event and will use the LoJack system to recover stolen vehicles, including the Charlotte-Mecklenburg Police Department, Cabarrus County Sheriff's Department, Department of Criminal Information, Department of Motor Vehicles, Gaston County Police Department, Gastonia Police Department, Kannapolis Police Department, Matthews Police Department, Mint Hill Police Department and Union County Sheriffs Department.

-more-

At the press conference, Joseph F. Abely II, president and COO of LoJack Corporation, discussed the critical partnership LoJack has established with multiple law enforcement agencies in the area, who together can offer a better level of vehicle theft protection to area residents.

“Auto theft has been on the rise nationally now for three consecutive years, and here in North Carolina 68 vehicles are stolen each day. The joint effort we launched today marks a significant step toward helping to combat vehicle theft in the greater Charlotte area,” said Abely. “All of the 10 agencies have showed tremendous cooperation and have been instrumental in helping to bring this powerful solution to area residents.”

LoJack Police Tracking Computers Donation and Law Enforcement Support

LoJack has donated the infrastructure to connect its systems directly to the area’s law enforcement agencies, which includes the donation of 100 LoJack Police Tracking Computers, which are installed in law enforcement vehicles to track and recover stolen vehicles. In addition, LoJack has on staff law enforcement liaisons (former police officers with an expertise in auto theft), who are based in the Charlotte area and will work to provide training and ongoing support to area law enforcement agencies in their use of the LoJack system.

How LoJack Works

The LoJack Stolen Vehicle Recovery System includes a small wireless radio-frequency transceiver that is hidden in a vehicle in one of 20 possible locations at the time of purchase. Once the vehicle is reported stolen to the police, state law enforcement computers match the vehicle identification number to the LoJack system. After the match, the LoJack system is automatically activated, emitting silent radio signals from a small radio transceiver. Law enforcement vehicles with LoJack technology follow these signals, which lead to the stolen vehicle.

The 90 percent recovery rate for vehicles equipped with LoJack has translated over the past 18 years into more than \$1 billion in recovered assets in the United States.

LoJack Availability

LoJack products are now available at participating automobile dealerships in the greater Charlotte region. The base LoJack Stolen Vehicle Recovery System retails for \$695 and the LoJack Early Warning System, which automatically notifies consumers if their vehicle is moved without permission, retails for \$995.

About LoJack Corporation

LoJack Corporation, the leading worldwide marketer of wireless security and location products and services, is the undisputed leader in global stolen vehicle recovery. Its stolen vehicle recovery system, the only system of its kind delivering a 90 percent success rate, is uniquely integrated into law enforcement agencies around the country that use LoJack's in-vehicle tracking equipment to recover stolen vehicles – typically within only a few hours. Unlike many competing products, LoJack systems do not involve “intermediaries” at call centers. Rather, LoJack systems place recovery directly in the hands of law enforcement, which expedites and promotes success in vehicle recovery. The LoJack System operates coast-to-coast in 22 states and the District of Columbia, representing the areas with the greatest population density, highest number of new vehicle sales and incidents of vehicle theft. LoJack is also operated by law enforcement and security organizations in more than 25 countries in Europe, Africa, Asia, and the Western Hemisphere.
